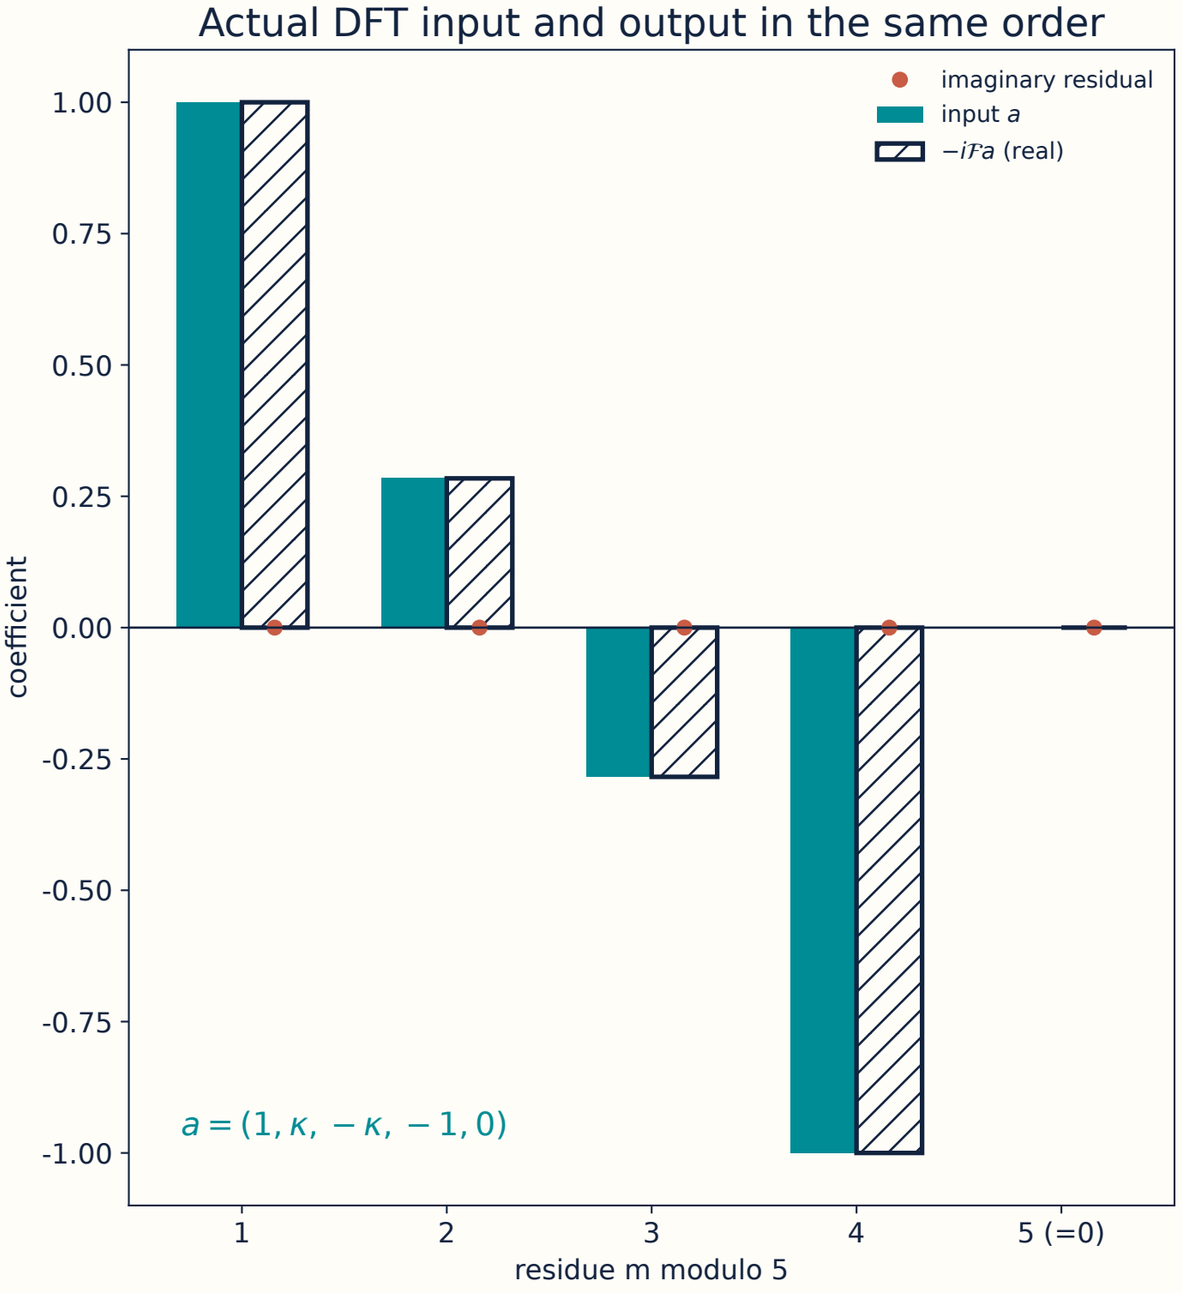
Figure 07. The odd five-periodic Fourier eigenvector, residue by residue



Golden geometry = gold | Fourier / theta = teal | modular map = violet | CM / Hermite = blue

Odd five-periodic coordinates

$$(a_1, a_2, a_3, a_4, a_0) = (x, y, -y, -x, 0)$$

1	2	3	4	5=0
x	y	$-y$	$-x$	0

Positive-exponential normalized DFT; multiplication by $-i$ makes the odd subspace real.
