
Golden geometry = gold | Fourier / theta = teal | modular map = violet | CM / Hermite = blue

i

$$q = e^{-2\pi}$$

$$j(i) = 1728$$

fixed point selects $r(i) = \kappa$

$$\tau_{163} = (1 + i\sqrt{163})/2$$

$$q = -e^{-\pi\sqrt{163}},\ j = -640320^3$$

integral j-value and tiny negative nome
