
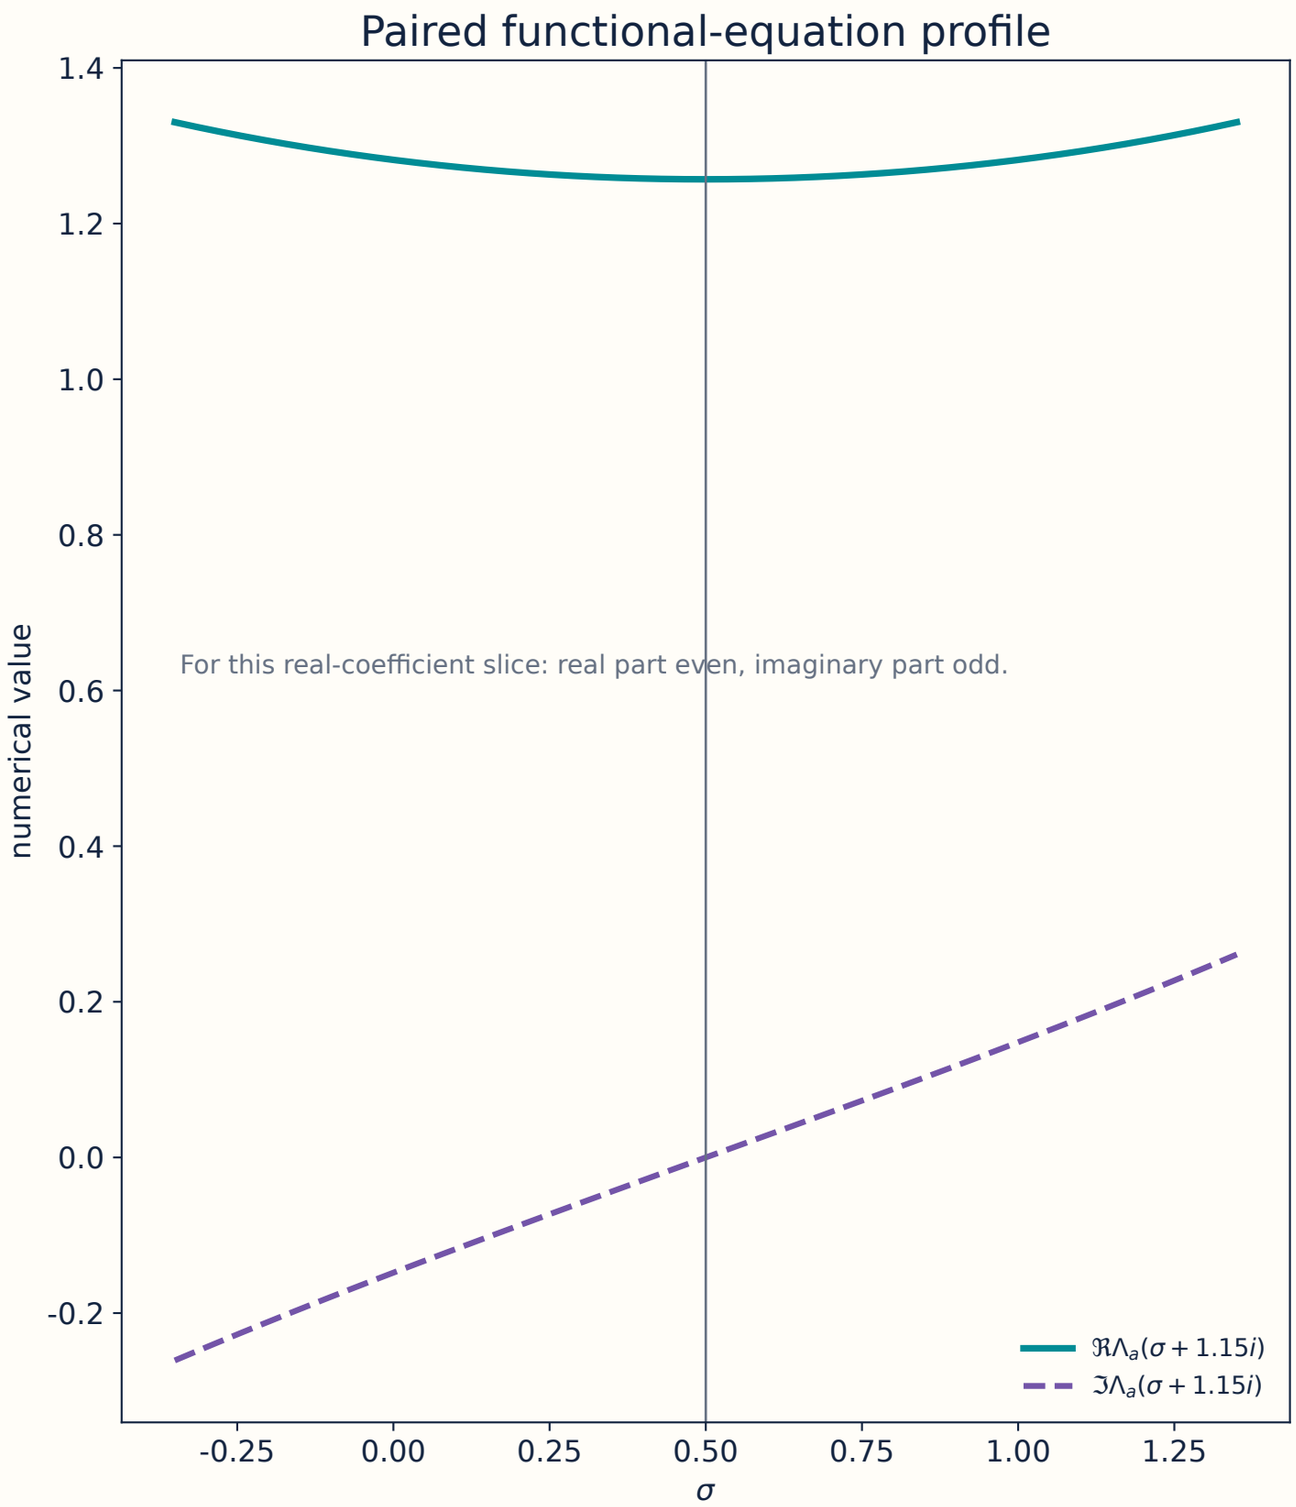
$$\Lambda_a(s) = (5/\pi)^{(s+1)/2}\Gamma((s+1)/2)\,5^{-s}\sum_{j=1}^{4} a_j \zeta(s, j/5)$$

Here $a = (1, \kappa, -\kappa, -1, 0)$; $\Lambda_a(s) = \Lambda_a(1-s)$.


Even/odd complex slice: real a, with conjugation in the paired statement.
