

The controller, harmonic response and acyclic history must fit one contraction.

$$\text{Actuation : } \quad [a, U_j], \quad [x, U_j] \qquad (F_1 = ua + vx)$$

$$\rho_{\text{mix}} \, d|_{M_{\text{mix}}} = \text{id}, \qquad W^{\text{nc}}_{\leq n} \cap Z^2 = 0$$

The split mixed reservoir supplies lifts; the separate history condition enforces compatibility.
