

Strict resonance-faithful naturality

$$\Theta'(\Phi_T a) = \Phi_L \Theta(a) \Phi_L^{-1}$$

$$\rho'_{\text{res}}(\Phi_T a) = \rho_{\text{res}}(a), \quad \rho'_{\text{res}} = (\Phi_T^{-1})^\vee \rho_{\text{res}}$$

intrinsic marked object: resonant line + maximal response domain + response operator; not a fixed primitive or fixed boundary vector
