

For fixed h , $x_b(k)$ is the coefficient of $u^k v^b$ in F_{k+b} , for $b = 2, 3, 4, 5$.

Each rail : $A = -h \operatorname{ad}_\alpha$ Adjacent forcing : $-h[\xi, -]$

$\delta F \in (v^6) \implies x_2, x_3, x_4, x_5$ unchanged (fixed low-rail data)
