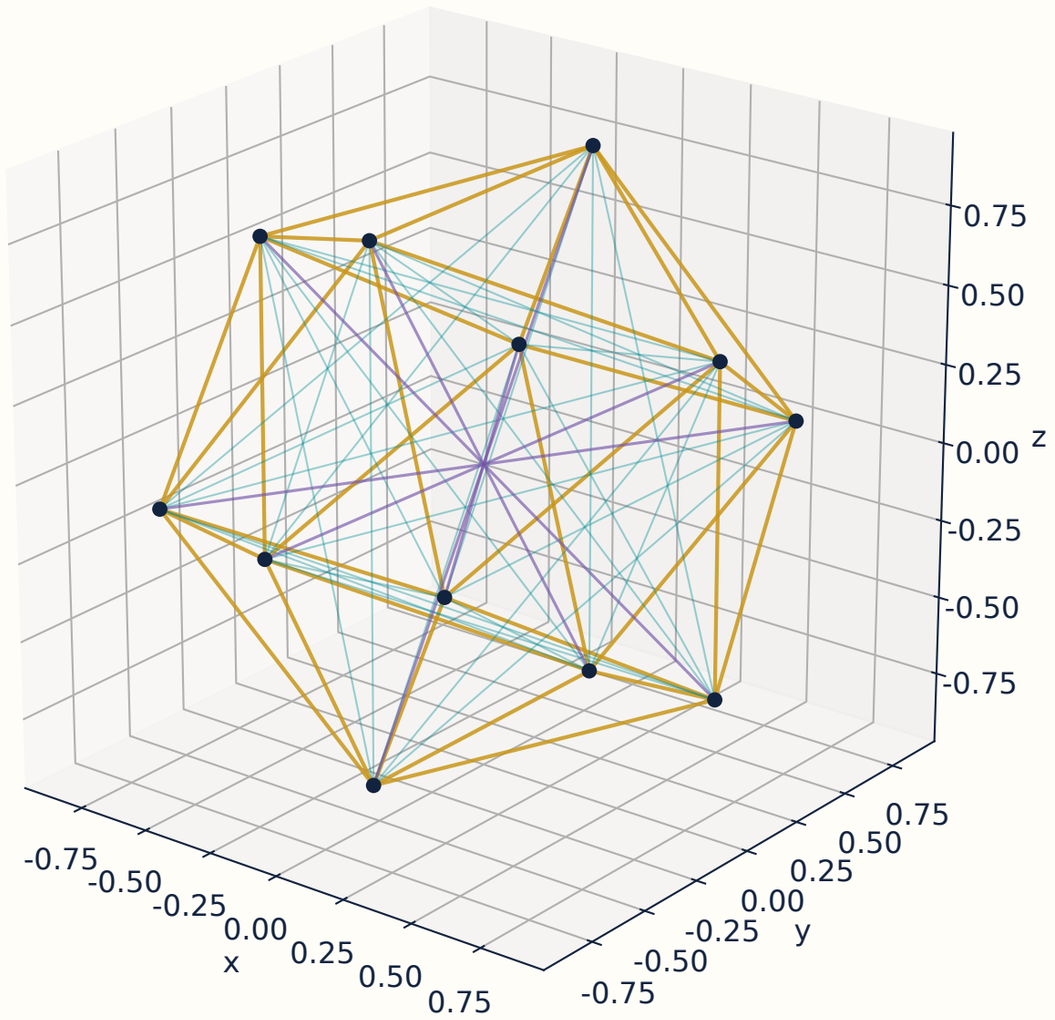
Figure 12. Context: the marked icosahedral chord ratio realizes c_0

Unit-radius marked icosahedron



All 66 unordered pairs

30 short chords

30 long chords

6 antipodal pairs

$$\frac{(\text{short})^2}{(\text{long})^2} = \frac{2 - 2/\sqrt{5}}{2 + 2/\sqrt{5}} = c_0 = \phi^{-2}$$

Golden geometry = gold | Fourier / theta = teal | modular map = violet | CM / Hermite = blue
